In rat hippocampal slices, bath application of GABA evoked inward currents in CA1 neurons. Currents reversed at a potential approximately 10 mV more positive than the equilibrium potential for Cl⁻ (ECl) and were antagonized by bicuculline, a GABAA receptor antagonist. The reversal potential for Cl⁻ and the inhibitory potency of bicuculline against the responses evoked by 1 mM GABA suggested that the currents were mediated by a Cl⁻ conductance. The affinity of GABA for the GABAA receptor was reduced by a 4-fold rise in the intracellular concentration of [Cl⁻] (40 mM). The reduction in the affinity of GABA was accompanied by an increase in the potency of GABA in evoking a response. Bath application of the K⁺ channel blockers 4-aminopyridine and tetraethylammonium at a concentration of 1 mM also reduced the affinity of GABA for the GABAA receptor. The actions of 4-aminopyridine and tetraethylammonium were potentiated by increases in the intracellular [Cl⁻]. Bicuculline, the

Enhance your drawing experience by incorporating an extremely versatile software “Assist” tool. This tool assists with nearly all aspects of your design, including: marking, drafting, dimensioning, labeling, picking and placing, and measuring. (video: 1:39 min.) Use the multi-touch gesture system to interact with your drawings, without pointing and clicking. By simply touching and dragging your finger across the screen, you can perform an array of functions. (video: 1:06 min.) Model-space 3D: Support is here for you to get out and explore your designs in the third dimension. Navigate your 3D models just as you do in the 2D model, using the space bar to move in any direction. Also, use the left and right arrow keys to zoom in or out, and up and down to pan. (video: 1:44 min.) When you drag an existing model into place, you can resize it to fit the area of the screen. Using AutoCAD ModelSpace and the space bar, you can easily move models out of place. (video: 1:23 min.) Refresh the current view with a new model from any source, such as importing a DXF or PDF file. You can also choose from many different predefined source locations, including the 2D object window, drawing files, layers and objects, and model space. (video: 1:15 min.) When you create or edit a 2D design in ModelSpace, you can apply to the new model the same text style, line style, color, or line and color attributes that you used in the 2D model. (video: 1:07 min.) Export your 3D models to Excel, Google Earth, or other applications. Create 3D models from CAD drawings and add them to a 3D model, providing a great way to collaborate with your clients. (video: 1:18 min.)
